

# Valor DoctorCare™ Program

Valor HospiceCare & PalliativeCare has developed the Valor DoctorCare™ program to provide support to Doctors and other healthcare professionals through services aimed at reducing their already intensive workloads.

## Goal

Our goal is to increase value to the partnerships created with referring physicians and healthcare providers.

## Features

- Our Medical Director's are available for pre-hospice evaluation consultations and education. Upon request, a palliative medicine trained specialist will make a patient visit to assess complex symptoms and discuss findings and suggestions with the requesting physician.
- Working with the Primary Physician for hospice patients in our program, our Medical Directors are available for in-home palliative care consultations for pain control and symptom management.
- A Clinical Pharmacist is available to ensure accurate and appropriate medication.
- We offer streamlined documentation processes with a focus on electronic data transfer and retrieval.
- We provide secure area access to our Website for policy review and information related to terminal illness and treatment options.
- For eligibility criteria for common diagnosis, our Hospice Referral Reference Guide and Billing Guides are available.
- We offer palliative and hospice care training programs for physicians and staff.

## Benefits

- We work *with you* to promote and support quality of life for your patients and their families facing end of life issues.
- Our services reduce readmission rates and crisis management, reducing overall costs.
- Extending our improved standards of care beyond the patient and family helps create more efficient use of time for healthcare providers and the medical community at large.

Please call 877.615.3996 or visit our website [www.valorhospicecare.com](http://www.valorhospicecare.com) for more information on Valor HospiceCare's DoctorCare™ or other programs.
